English as a Global Language
David Crystal's classic English as a Global Language considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1,500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However, Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language. This report focuses on how human development can be ensured for everyone, now and in the future. It starts with an assessment of the hopes and challenges of today's world, envisioning where humanity wants to go. This vision draws from and builds on the 2030 Agenda and the Sustainable Development Goals. It explores who has been left behind in human development progress and why. It argues that to ensure that human development reaches everyone, some aspects of the human development framework and assessment perspectives have to be brought to the fore. The Report also identifies the national policies and key strategies to ensure that every human being achieve at least basic human development and to sustain and protect the gains. This report analyses the impact of ‘Shifting wealth’ on social cohesion, largely focusing on high-growth converging countries. How should one organise a ministry of education which has only a small group of professional staff? Officers must become multi-functional; but what tasks should be grouped together, and how? What styles of management are needed for the highly personalised nature of small states, in which individuals have multiple out-of-work relationships as well as formal in-work ones? What arrangements can be made for career paths in a small organisation? And how can small ministries best manage the demands of regional and international linkages? These are among the questions addressed in this book. It is the product of a recent Commonwealth project in which officers from small ministries contributed practical insights. Experiences have been distilled and analysed, and are presented in a lively and readable format for both administrators and trainers. A companion book contains 14 case studies in a country-by-country format. Also available from the Commonwealth Secretariat, it is entitled Ministries of Education in Small States: Case Studies of Organisation and Management. Publisher Description
The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if crises do take place, will alleviate their impact. Bionanomaterials are identified as a perfect replacement, in the quest for the search of an alternative to toxic conventional nanomaterials for biomedical applications. Bionanomaterials are the nanomaterials, that are fabricated via biomolecules or encapsulate or immobilize a conventional nanomaterial with a biomolecule. The biomolecules extracted from the microbes, plants, agricultural wastes, insects, marine organisms and certain animals are used for the formation of bionanomaterials. These bionanomaterials exhibited low or negligible toxicity towards humans, other organisms and the environment with enhanced biocompatibility, bioavailability and bioreactivity. Thus, the aim of this book is to provide an overview of various bionanomaterials, their synthesis, characterization and their applications. The chapter is divided into two parts – Part 1 discusses about the bionanomaterials of exclusive natural origin, self-assembled bionanomaterials and their environmental application and Part 2 focuses on applications of distinct bionanomaterials in biomedical sciences. The ‘Chapter 1 – Bionanomaterials: Definitions, sources, types, properties, market, toxicity and regulations’ aims to provide an extensive overview of bionanomaterials, their definitions, sources, types and their properties. In addition, the toxicity of bionanomaterials and their regulations implied in recent times were also discussed. ‘Chapter 2 – Nature inspired bionanomaterials’ highlights different types of nature-inspired biosynthesized nanomaterials and their green synthesis methods, as well as some of their emerging applications, especially in the fields of nanomedicine, cosmetics, drug delivery, molecular imaging, and catalytic precursors. Further, the chapter also covers different types of bionanomaterials (e.g., viruses, protein cages, and phages) and highlights their unique properties and potential applications. ‘Chapter 3 – Culinary spices mediated biogenesis of nanoparticles for cancer and diabetes treatment’ deals with bionanomaterials synthesized by using extracts of culinary spices and its vital role in the treatment of distinct types of cancer and diabetes. In ‘Chapter 4 – Environment friendly superhydrophobic bioactive nanocoatings’, the authors have discussed the basics of exceptional water repellence behaviour and recent developments in the area of bioactive-SHC for various applications. In addition, the current and projected requirements for bioactive-SHC were also addressed. The authors of ‘Chapter 5 – Self-assembly of nanobionics: from theory to application’ reviewed, discussed, addressed and highlighted the recent advancements in bionics as an interdisciplinary field to understand the bionic materials and particles, that are mainly fabricated via self-assembly approach. At the time of independence from Britain in 1968, education in Swaziland was characterized by poor quality, uneven distribution of schools, high dropout and repeater rates, widespread illiteracy, and inappropriate curricula. This paper provides an overview of the status and high-level framework of International Organizations.

the teacher and mentor. His life at Manzini Nazarene is one that all his students remember as filled with great moments of teaching and learning. In this book his ideas on teaching are written about in a semi-fictional manner that enables readers to think about their own teaching. The dedication he brought to the teaching task has been analyzed to bring out how he taught composition, poetry, drama and the novel. His students in the class of '75 called him “Chaucer.” We thank York University and the Church of the Nazarene for making it possible for such a great teacher and thinker to “sow” into our lives. His students have grown to be professors, ministers, ambassadors and many other important careers that are serving the nation of Swaziland in wonderful ways. The life of a Christian teacher is something that can never be replaced in the lives of students. Gordon will be remembered in all the countries around the world where he worked for all that he gave. Gordon Thomas died of melanoma cancer in 2006. Fifteen in a series of annual reports comparing business regulation in 190 economies, Doing Business 2018 measures aspects of regulation affecting 10 areas of everyday business activity: • Starting a business • Dealing with construction permits • Getting electricity • Registering property • Getting credit • Protecting minority investors • Paying taxes • Trading across borders • Enforcing contracts • Resolving insolvency These areas are included in the distance to frontier score and ease of doing business ranking. Doing Business also measures features of labor market regulation, which is not included in these two measures. The report updates all indicators as of June 1, 2017, ranks economies on their overall “ease of doing business†?, and analyzes reforms to business regulation † identifying which economies are strengthening their business environment the most. Doing Business illustrates how reforms in business regulations are being used to analyze economic outcomes for domestic entrepreneurs and for the wider economy. It is a flagship product produced in partnership by the World Bank Group that garners worldwide attention on regulatory barriers to entrepreneurship. More than 137 economies have used the Doing Business indicators to shape reform agendas and monitor improvements on the ground. In addition, the Doing Business data has generated over 2,182 articles in peer-reviewed academic journals since its inception. Data Notes; Distance to Frontier and Ease of Doing Business Ranking; and Summaries of Doing Business Reforms in 2016/17 can be downloaded separately from the Doing Business website.
